

ThrowNote

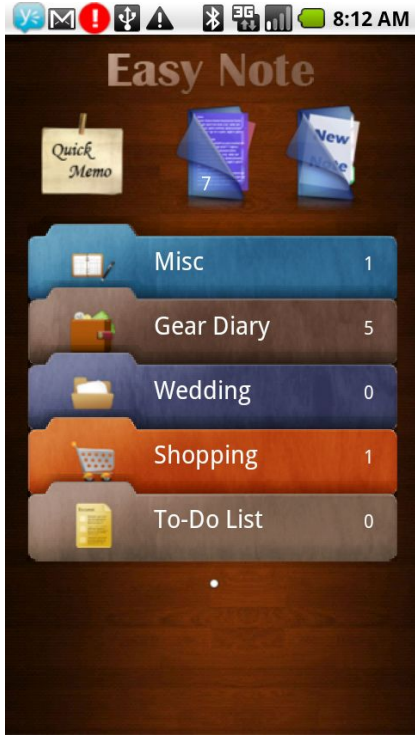

Jake Dawkins

What is ThrowNote?

- Short-form note taking
- Useful for
 - Quick reminders
 - Archiving information
 - Bookmarks
 - Quick reference
 - Daily journal

Problem to be Solved

Long-Form note taking tools are complicated

Writing a small note takes too long

Large app/download sizes

Forced Organization

Approach

- Create an app to store text, image, audio, and bookmark notes
- Simple user interface with only a few buttons
- Little potential for error
- Quick interactions
- One-Tap bookmarking
- Easy to search

What I Planned to Accomplish

- API & PHP Authentication Complete
- All app features work locally
- Text content of notes sync to server
- Technical Reference Manual Progress
 - 75% of API documentation complete
- User manual has real screenshots and 50% of instructions finished

Done

- API & PHP Authentication Complete
- Local text & image storing of notes
- Text content of notes sync to server
- Technical Reference Manual Progress
 - 75% of API documentation complete
- User manual has real screenshots and 50% of instructions finished

Updated Schedule

18 April:

- Complete First Draft of Software and Documentation.
- App syncs all data to server.
- Technical Reference manual complete. All API documentation complete.
- User manual has 75% of all how-to instructions and a troubleshooting section.
- One how-to video.
