SUMMARY

I'm a curious software engineer, with experience across the stack. I've worked with React and GraphQL-based products for much of my career, but I've also built editor extensions and CLI tools for a broad audience. I have a passion for maintainable and accessible software. I have a strong foundation with testing methodologies, and I have experience writing and speaking publicly on software best practices. I'm a learner and a teacher, and I love what I do. I value empathetic, diverse, and cross-functional teams.

EXPERIENCE

Staff Software Engineer, Homeaglow

Jul 2024 – Present (2 yr 4 mo) · Remote

- Rebuilt the main marketing landing page and checkout, then ran five experiments testing different designs on the new build; the winner raised purchase conversion by 17-20% and drove record daily sales.
- Built a new membership model end to end across web, mobile, and backend, iterating through four versions until it became the national default offer.
- Independently scoped and built an inside sales tool with no product or design support, letting agents book a cleaning and sell a membership in one flow; in a pilot it raised leads handled per hour by 28%, cut handle time by 14%, and halved agent training time.
- Shipped a steady stream of checkout experiments, with wins of +15%, +13%, and +10% purchase conversion.
- Led adoption of Statsig as the experimentation platform across all major products, and fixed setup and cohorting bugs that had been invalidating results.
- Co-built the new React Native customer app, rebuilding it screen by screen with an experiment on each flow, through App Store and Google Play release.

Senior Software Engineer, Homeaglow

Feb 2023 – Jul 2024 (1 yr 6 mo) · Remote

- Led the new customer web app and booking flow, for a time as the only engineer, and launched them to all new customers, raising voucher redemption by 3 percentage points.
- Rebuilt the main marketing landing page in Next.js to be faster and more accessible, then shipped a bundle of winning tests on it for a 10% conversion lift.
- Built frontend experimentation infrastructure, first for the booking flow (cutting launch time from weeks to under two days), then for the main marketing landing page.
- Migrated the customer web app from legacy Django view handlers to GraphQL.

Tools: React, React Native, Expo, Next.js, TypeScript, Tailwind CSS, Apollo Client, GraphQL, Django, Statsig, Stripe

Senior Product Engineer, Carbon Health

May 2021 – Jan 2023 (1 yr 9 mo) · Remote

- Led efforts to rebuild legacy enterprise product with modern tooling (React Native Web, Next.js, TypeScript, Tailwind CSS, Apollo Client).
- Set up an interface system used across all major applications and teams at the company.
- Decreased user load times by 90% with the new product.
- Set standards for modern front-end architecture for the broader organization.
- Coordinated with product teams to set deadlines and roadmaps.
- Developed contribution guidelines and schema design documents for inter-team collaboration to a shared GraphQL service.
- Designed and implemented unit & e2e testing strategy, attaining a minimum of 90% test coverage.

Tools: React Native Web, Next.js, TypeScript, Tailwind CSS, Apollo Client, GraphQL

Open Source Engineer, Apollo GraphQL

2019 – May 2021 · Remote

- Led initiative to build a new CLI for Apollo's main product line using Rust.
- Assisted in designing and building Apollo Federation's composition algorithm and supporting tests.
- Coordinated features with multiple teams and product roadmaps to ensure a smooth rollout across teams.
- Led experimentation and proposal of a new language (Rust), which now has a growing influence in the company.
- Maintained open-source developer tools such as the Apollo CLI and VS Code editor extensions.
- Engaged with the community regularly for technical support, feature requests, and guidance on best-practices.
- Communicated and taught on tooling through blog posts, conference talks, and internal demos.

Apollo Architect, Apollo GraphQL

Apr 2018 – 2019 · Remote

- Led frontend & backend architecture reviews for customers.
- Wrote extensive documentation and technical guides.
- Led training sessions and workshops for GraphQL and React.
- Collaborated with engineers inside & outside of Apollo to develop best practices documentation for using GraphQL in production.
- Spoke at conferences and meetups about GraphQL.
- Maintained multiple Apollo open source projects.

Tools: Rust, TypeScript, Node.js, GraphQL, Apollo Federation, VS Code API

Lead Engineer, Mobile, Major League Soccer

Jul 2017 – Apr 2018 (10 mo) · New York, NY

- Built Android and iOS native apps using React Native.
- Built and maintained GraphQL API with Apollo-Server.
- Mentored junior engineers in their first engineering role.
- Set up type systems and unit testing.
- Managed project timeline and development process.
- Organized weekly team teaching sessions on various technical topics.

Tools: React Native, GraphQL, Apollo Server

Web Developer, NewSpring

May 2016 – Jul 2017 (1 yr 3 mo) · Anderson, SC

- Developed web and native mobile applications using React, Redux and React-Apollo.
- Built and maintained GraphQL server to aggregate data from MSSQL, MongoDB, and MySQL in Node.js.
- Managed a MSSQL database which tracked financial data and personal information across the organization.
- Unit tested projects using Jest and Enzyme.
- Implemented static typing for JavaScript in Flow.

Digital Media Content Coordinator, NewSpring

Jun 2012 – May 2016 (4 yr)

- Managed an archive of digital content ranging 15 years.
- Developed automation and delivery pipeline workflows to handle audio and video encoding and delivery.
- Edited and produced video content for this archive from many weekly live events.
- Operated professional level broadcast equipment and cameras.
- Wrote training documentation to teach volunteers on the equipment.
- Led a volunteer team of approximately 100 people in live video positions.
- Received and handled requests for content across the organization.

Tools: React, Redux, React-Apollo, Node.js, GraphQL, Flow, Jest

SKILLS

Frontend: React, React Native, Next.js, TypeScript, Tailwind CSS, Flow

APIs & data: GraphQL, Apollo Client & Server, Apollo Federation, Node.js, MSSQL, MongoDB, MySQL

Practice: Web accessibility (W3C), Testing strategy, Rust & CLI tooling, Mentoring, Writing & speaking

CERTIFICATIONS

Certified Professional in Accessibility Core Competencies (CPACC), IAAP. Valid through Dec 2026.

EDUCATION

B.S. Computer Science, Clemson University, 2012 – 2016. Dean's List.

TALKS

Open Source Software From My Eyes, Clemson University (2021)

Testing GraphQL, GraphQL Summit 2018 (2018)

A Hands-On Look at Apollo GraphQL, Apollo Day (2018)

State Management with Apollo, GraphQL Radio, Episode 12 (2018)
