

GRAPHQL TOOLING

JAKE DAWKINS

WHAT I'M TALKING ABOUT

- The promise of GraphQL
- The state of GraphQL tooling
- A modern tooling setup
- Where we're going

THE PROMISE OF GRAPHQL

THE PROMISE OF GRAPHQL

A GraphQL server can be queried for the types it supports. This creates a powerful platform for tools and client software to build atop this information...

SCHEMA AWARENESS

SCHEMA AWARENESS ENABLES...

- Code generation
- Editor improvements

SCHEMA REGISTRIES

REGISTRIES ENABLE...

- Advanced usage metrics
- Schema change validation
- Operation safelisting
- And much more

THE STATE OF GRAPHQL TOOLING

The tooling ecosystem around GraphQL is powerful, capable, but disconnected and not complete.

CODE GENERATORS

- Apollo Codegen (Apollo CLI)
- GraphQL Code Generator

EDITOR PLUG-INS (JS).

- Apollo GraphQL
- Graphql

INTROSPECTION/RUNTIME TOOLING

- GraphQL/GraphQL Playground
- Apollo Client Devtools
- GraphQL Voyager

**Toolsets are best when they can be configured
in unison and work with one another**

CONFIGURING GRAPHQL TOOLS

- Where does the reference schema info come from?
- Where do queries and type definitions come from?
- Handling multiple projects, including ones that share schemas or operations
- Platform-specific concerns (Registry endpoints, API keys, reporting URLs)

A MODERN TOOLING SETUP

A MODERN TOOLING SETUP...

- Tracks schemas in a registry
- Checks service schema changes against traffic
- Safelists permitted operations in production
- Generates types for client operations
- Checks client operation changes against the schema

WHERE WE'RE GOING

WHERE WE'RE GOING

- Generating new projects from the CLI
- Schema explorer link to schema registry
- Ability to save operations and generate hooks and types

THANK YOU!

@JakeDawkins
